

## Polycaprolactone Electrospun Fiber Scaffold Loaded With iPSCs-NSCs And ASCs As A Novel Tissue Engineering Scaffold For The Treatment Of Spinal Cord Injury [Corrigendum]

Zhou X, Shi G, Fan B, et al. *Int J Nanomedicine*. 2018;13:6265–6277.

Following a review of our data post-publication, we found the incorrect original image was supplied for Figure 4C. The

correct image is shown in this corrigendum. This correction of the image has no impact to the findings of the study. The authors apologize for this error.

On page 6273, Figure 4C should be presented as follows:

**Figure 4** Axonal regeneration and remyelination of transplanted cells in injured spinal cord.

**Notes:** (C) H&E staining of Group 1 (a), Group 2 (b), Group 3 (c), and Group 4 (d). Arrows: infiltrated cells in spinal cord. Scale bar = 100  $\mu$ m.

**Abbreviation:** H&E, hematoxylin–eosin.

**International Journal of Nanomedicine****Dovepress****Publish your work in this journal**

The International Journal of Nanomedicine is an international, peer-reviewed journal focusing on the application of nanotechnology in diagnostics, therapeutics, and drug delivery systems throughout the biomedical field. This journal is indexed on PubMed Central, MedLine, CAS, SciSearch®, Current Contents®/Clinical Medicine,

Journal Citation Reports/Science Edition, EMBase, Scopus and the Elsevier Bibliographic databases. The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit <http://www.dovepress.com/testimonials.php> to read real quotes from published authors.
