

CORRIGENDUM

The Development of a Nomogram to Predict Post-Radiation Necrosis in Nasopharyngeal Carcinoma Patients: A Large-Scale Cohort Study [Corrigendum]

Li X-Y, Sun X-S, Liu S-L, et al. *Cancer Manag Res.* 2019;11:6253–6263.

In Table 2, the authors identified the risk factors of nasopharyngeal necrosis using a logistic regression model, and the final nomogram model was constructed based on these results. However, the outcome of the univariable analysis and multivariable analysis reported in Table 2 was mistakenly listed as overall survival (HR) and should have been reported as the likelihood of necrosis (OR).

Table 2, column 2 heading reads "Univariable analyses HR (95% CI)" should read "Univariable analyses OR (95% CI)". Table 2, column 4 heading reads "Univariable analyses HR (95% CI)" should read "Multivariable analyses OR (95% CI)".

The authors wish to apologize for this error.

Publish your work in this journal

Cancer Management and Research is an international, peer-reviewed open access journal focusing on cancer research and the optimal use of preventative and integrated treatment interventions to achieve improved outcomes, enhanced survival and quality of life for the cancer patient.

The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit <http://www.dovepress.com/testimonials.php> to read real quotes from published authors.
