

Wear Experience of a Water Surface Daily Disposable Contact Lens in Existing Silicone Hydrogel Planned Replacement Lens Wearers [Corrigendum]

Rutschilling R, Fogt JS. *Clin Optim (Auckl)*. 2022;14:27–34.

Page 28, first paragraph, fourth sentence, the text “A study of non-invasive tear breakup time found that a lens with a high water surface which encapsulated a silicone core had a statistically significant decrease in tear breakup time when compared to other daily disposable silicone hydrogel lenses” should read “A study of non-invasive tear breakup time found that a lens with a high water surface which encapsulated a silicone core had a statistically significant increase in tear breakup time when compared to other daily disposable silicone hydrogel lenses”.

The authors apologize for this oversight and advise it does not affect the results of the paper.

Publish your work in this journal

Clinical Optometry is an international, peer-reviewed, open access journal publishing original research, basic science, clinical and epidemiological studies, reviews and evaluations on clinical optometry. All aspects of patient care are addressed within the journal as well as the practice of optometry including economic and business analyses. Basic and clinical research papers are published that cover all aspects of optics, refraction and its application to the theory and practice of optometry. The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit <http://www.dovepress.com/testimonials.php> to read real quotes from published authors.
